Universidad Nacional de La Plata | March 2014- December 2020

WORK EXPERIENCE

FULL STACK DEVELOPER

XYCLON

November 2021 - Present

We work with different companies such as Natura, BBVA, Balanz, Nissan, etc.

We use frameworks like React.js and Laravel (PHP). SQL for the databases, Sass for the styles and Vite for the compilations, among other technologies.

WEB DEVELOPMENT

FREELANCE

October 2021 - Present

- Development of a website for coaches designed to receive advertising traffic and brand positioning. I use Node.js.

E-COMMERCE DEVELOPMENT: WINE SHOP

March 2021 - September 2021

- Carried out within the framework of the Digital House Integrator project.

- Available on Git Hub

Development of a web application that is an e-commerce using HTML for the structure, CSS for the design and Javascript for interactions and validations on the client side.

The design and development of the FrontEnd takes the good practices of making sites responsive using the mobile-first method.

The BackEnd was developed with Node.js using good practices by MVC architecture .

We design and use a UML for the assembly and organization of a relational database with which we then interact through MySQL and Sequelize.

The entire project was carried out following the guidelines of Agile methodologies (Scrum), and was managed using Git for version control, in a repository of collaborative and organized work.
